Summary

Full-stack software engineer with 2 years in production across Angular, TypeScript, and Go. My work centers on the structural layer: CI pipelines, legacy refactors, and internal tooling. I work AI-assisted with Claude Code and OpenCode in my daily workflow, and maintain an open-source AI agent framework with 57 npm releases.

Experience

Software Engineer, Badan Sistem Informasi, Universitas Islam Indonesia – Yogyakarta, Indonesia — Oct 2024 – Present

- Rebuilt the GitLab CI deployment pipeline for a 20+ module Angular platform backed by 13 REST endpoints, cutting release time from 20–30 minutes to 1–3 minutes; adopted as the standard across 7 engineering teams
- Cut MySQL queries that regularly timed out from up to a minute to under 10 seconds, using composite indexes and N+1 query elimination on Go/Gin and PHP/Lumen backends
- Converted a 66,000-line Angular library to full Indonesian and English support: 53 templates, 1,718 bindings, and 619 dictionary keys. Authored the migration schema and a file-by-file pre-work audit
- De-duplicated 7 near-identical submission-form modules and eliminated RxJS subscription leaks and race conditions across partnership components
- Designed multi-level RBAC routing with 21 per-role workflow components
- Authored the team's engineering standards, development workflow guide, and release-versioning model: 120 KB of documentation that now governs multi-environment releases

Front-End Developer (Freelance), Softwaredeecode – Remote — Nov 2025 – Apr 2026

- Developed the admin and student frontends of TembusIn, a 4-track exam-prep LMS (SNBT, TKA, CPNS, PPPK), in React, Vite, TypeScript, and Tailwind CSS
- Translated Figma specs into responsive interfaces and integrated REST APIs with typed clients and skeleton loading states
- Optimized animation performance and deployed the production build to a VPS

Web Developer, TerraCode – Remote — Oct 2023 – Jan 2024

- Delivered 5 client websites in WordPress and Elementor across Indonesian, Vietnamese, and European markets
- Built a WPML multilingual cruise-booking site and ran on-page SEO campaigns for lead-generation sites: salsationcruise.com, deresto.eu, theextramile.co, cg-carworks.com, and pelanbali.com

Projects

Noir — July 2026 – Present

Open-source orchestration and memory layer for AI coding agents · github.com/agaaaptr/noir

- Published an 11-package TypeScript monorepo to npm with native installers for macOS, Linux, and Windows
- Built a hybrid retrieval engine combining BM25 and vector kNN with Reciprocal Rank Fusion, exposed through an MCP daemon serving 24 tools to 5 AI coding hosts
- Added 216 test files and set up a release pipeline using npm OIDC trusted publishing with SLSA provenance attestation

CoopLedger — Nov 2026 – Present

Savings-and-loan cooperative system · Angular, Spring Boot, PostgreSQL · github.com/agaaaptr/coopledger

- Built CoopLedger, a savings-and-loan cooperative system, with a Spring Boot 3.5 / Java 21 REST API: JWT auth, 3-role RBAC, and PostgreSQL managed via Flyway
- Modeled savings (pokok/wajib/sukarela) and the loan lifecycle with flat-rate interest in BigDecimal, and built the Angular 20 SPA with Signals and functional guards

Skills

Programming Languages: TypeScript, JavaScript (ES6+), Go (Golang), Java, PHP, SQL, HTML5, CSS3

Frameworks & Libraries: Angular, React, Next.js, Spring Boot, Gin, Lumen, Tailwind CSS, Vite, REST API

Databases & Tools: MySQL, PostgreSQL, Flyway, Git, Figma, WordPress

AI & Tooling: Claude Code, OpenCode, MCP, AI-assisted development

Spoken Languages: Indonesian (Native), English (Professional Working Proficiency)

Education

Universitas Teknologi Yogyakarta, Bachelor in Informatics – Yogyakarta, Indonesia — 2020 – 2024

- GPA: 3.58/4.00
