

Gagah Putra Anugrah

SOFTWARE ENGINEER

Sleman, Yogyakarta | +6281293309095 | gagah.p.412@gmail.com

SUMMARY

Full-Stack Software Engineer focused on building modern web applications using Angular, React, TypeScript, Go (Golang), and a range of supporting technologies. Experienced in delivering end-to-end solutions, from developing responsive user interfaces to implementing secure and scalable backend services. Strong understanding of software architecture, API integration, database management, performance optimization, and software development best practices. Committed to delivering clean, maintainable, and high-quality code that supports product growth and evolving business requirements.

EXPERIENCE

BSI UII (Universitas Islam Indonesia) | Software Engineer

October 2024 – Present

- Design, develop, and maintain scalable web applications across both frontend (Angular, TypeScript) and backend (Go, Gin, MySQL) environments.
- Design and implement modular, reusable UI components while maintaining high performance, responsiveness, and cross-browser compatibility.
- Build and integrate RESTful APIs, including data flow management, validation, and state management for dynamic application features.
- Improve application performance, reliability, and maintainability through code refactoring, best practices, and efficient database query management.
- Collaborate cross-functionally with designers and engineers to define system requirements, align architectural decisions, and deliver end-to-end solutions.

Softwaredecode | Front-End Developer (Freelance)

November 2025 – April 2026

- Developed scalable and high-performance frontend solutions using React, Vite, TypeScript, and Tailwind CSS, with a strong focus on clean architecture and maintainability.
- Translated Figma designs into pixel-perfect, responsive interfaces featuring modern UI patterns and smooth user interactions.
- Integrated RESTful APIs and collaborated directly with clients to deliver efficient, production-ready features aligned with business requirements.

TerraCode | Web Developer (WordPress)

October 2023 – January 2024

- Managed websites for international clients using WordPress and Elementor.
- Designed and developed websites, including corporate profiles and e-commerce platforms, based on client requirements using WordPress and Elementor.

Diet Pro | UI/UX Designer

June 2023 – September 2023

- Created low-fidelity wireframes and high-fidelity mockups for Android applications using Whimsical and Figma.
- Designed Android application interfaces and translated UI designs into XML layouts using Android Studio.
- Continuously optimized the user interface to improve usability and provide intuitive navigation.

EDUCATION

Universitas Teknologi Yogyakarta	2020 - 2024
Bachelor of Informatics GPA: 3.58/4.00	
SMA Negeri 1 Cipanas	2017 - 2020
Science Program	

SKILLS

Tech Stack

Angular, React, Next JS, Vite, TypeScript, JavaScript (ES6+), Go (Golang), Gin, MySQL, HTML5, CSS3, Tailwind CSS.

Tools & Platforms

Git, GitHub, Angular CLI, Visual Studio Code, Figma, Android Studio, WordPress.

Core Skills

Full-stack web development, RESTful API design and integration, scalable component architecture, responsive and cross-browser UI development, performance optimization, and translating design specifications into production-ready code.

Soft Skills

Problem-solving, effective communication, teamwork and collaboration, time management, and attention to detail.

Languages

Indonesian (Native), English (Professional Working Proficiency).
