

Gagah Putra Anugrah

Software Engineer — Full-Stack (Angular · TypeScript · Go)

Sleman, Yogyakarta, Indonesia · Open to remote (UTC+7) · +62 812-9330-9095

gagah.p.412@gmail.com · linkedin.com/in/agaaaptr · github.com/agaaaptr

SUMMARY

Full-stack software engineer with 2 years in production, working in Angular, TypeScript, and Go. Takes on the structural layer — CI pipelines, legacy refactors, internal tooling — and maintains an open-source AI agent framework with 57 npm releases.

EXPERIENCE

****Badan Sistem Informasi, Universitas Islam Indonesia** — Software Engineer**

Yogyakarta, Indonesia

October 2024 – Present

- Rebuilt the GitLab CI deployment pipeline for a 20+ module Angular platform backed by 13 REST endpoints, cutting release time from 20–30 minutes to 1–3 minutes; adopted as the standard across 7 engineering teams
- Cut frequently-timing-out MySQL queries from up to 1 minute to under 10 seconds through composite indexing and N+1 query elimination on a Go/Gin backend
- Converted a 66,000-line Angular library to full Indonesian and English support — 53 templates, 1,718 bindings, 619 dictionary keys — authoring the migration schema and a file-by-file pre-work audit
- De-duplicated 7 near-identical submission-form modules and eliminated RxJS subscription leaks and race conditions across partnership components
- Architected multi-level RBAC routing with 21 per-role workflow components and reusable shared Angular components served by Go/Gin and PHP/Lumen services
- Authored the team's engineering standards, development workflow guide, and release-versioning model — 120 KB of documentation now governing multi-environment releases

****Softwaredecode** — Front-End Developer (Freelance)**

Remote

November 2025 – April 2026

- Developed the admin and student frontends of TembusIn, a 4-track exam preparation LMS (SNBT, TKA, CPNS, PPPK) in React, Vite, TypeScript, and Tailwind CSS — live at [fe-tembusin.deecodesoftware.com](https://tembusin.deecodesoftware.com)
- Translated Figma specifications into responsive interfaces and integrated REST APIs with typed clients and skeleton loading states
- Optimized animation performance and owned production deployment to a VPS

****TerraCode** — Web Developer**

Remote

October 2023 – January 2024

- Delivered 5 client websites in WordPress and Elementor across Indonesian, Vietnamese, and European markets
- Built a WPML multilingual cruise-booking site and ran on-page SEO campaigns for lead-generation sites — salsationcruise.com, deresto.eu, theextramile.co, cg-carworks.com, pelanbali.com

PROJECTS

****Noir** — Open Source**

github.com/agaaaptr/noir · npmjs.com/package/@noir-ai/cli

TypeScript · Node.js · SQLite · MCP · React · Ink · Vitest

- Published an 11-package TypeScript monorepo to npm with native installers for macOS, Linux, and Windows
- Built a hybrid retrieval engine combining BM25 and vector kNN with Reciprocal Rank Fusion, exposed through an MCP daemon serving 24 tools to 5 AI coding hosts

- Enforced quality through 216 test files and a release pipeline using npm OIDC trusted publishing with SLSA provenance attestation

****Portfolio & Project Showcase** — Open Source**

aga-putra.vercel.app

Next.js · React · TypeScript · Tailwind CSS · Framer Motion

- Built a Next.js 16 portfolio with dynamically imported sections using `ssr: false` to eliminate framer-motion hydration mismatches
- Rendered all sections client-side behind scroll-tracked single-page navigation with section-state persistence

SKILLS

Programming Languages: TypeScript, JavaScript (ES6+), Go (Golang), PHP, SQL, HTML5, CSS3

Frameworks & Libraries: Angular, React, Next.js, Gin, Lumen, Tailwind CSS, Vite, REST API

Databases & MySQL, PostgreSQL, Git, Figma, WordPress

Tools:

Spoken Languages: Indonesian (Native) · English (Professional Working Proficiency)

EDUCATION

****Universitas Teknologi Yogyakarta** — Yogyakarta, Indonesia | August 2024**

Bachelor of Informatics (S1 Informatika)

GPA: 3.58/4.00
