I build and maintain production software for universities and client businesses, mostly in Angular, TypeScript, and Go. I work AI-assisted with Claude Code and OpenCode, a practice I adopted when I joined BSI UII in October 2024. This is the long-form companion to my CV: what each project does, the decisions behind it, and where you can see it running.

Selected Projects

five builds in depth, then five client sites

Noir

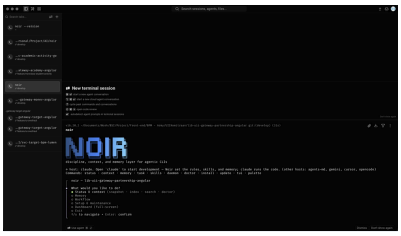

Developer · Open source

TypeScript · Node.js · pnpm · SQLite · Ink · React · MCP

Noir is an orchestration and memory layer for AI coding agents, built as an 11-package pnpm monorepo and published to npm. It started from a practical problem: agent sessions lose context, and most surrounding tooling locks you into a single host.

- A spec-driven workflow: idea, spec, plan, implement, verify
- Hybrid retrieval combining BM25 and vector kNN with Reciprocal Rank Fusion
- Cross-session memory with governance: audit trail and governed deletion
- 27 built-in skills, adapters for 5 AI coding hosts, and a persistent MCP daemon

It runs local-first and privacy-by-construction, with native installers for macOS, Linux, and Windows, and 57 npm releases to date.

CoopLedger

Full-Stack Developer · Personal project

Angular · TypeScript · Java · Spring Boot · PostgreSQL · Flyway · JWT

A savings-and-loan cooperative system: member registration, pokok/wajib/sukarela savings, a loan lifecycle with installment schedules, and SHU surplus distribution. Built as a deliberate monolith — one Spring Boot 3.5 API and one Angular 20 SPA.

- JWT auth with 3-role RBAC (admin, teller, member) enforced on the server
- Flat-rate koperasi interest in BigDecimal, with installments reconciled to principal + interest
- Flyway-managed PostgreSQL schema; Docker Compose and nginx same-origin proxy for local runs

TembusIn

Front-End Developer · Freelance

React · Vite · TypeScript · Tailwind CSS · REST API

A learning management system for Indonesian exam preparation, covering four tracks: SNBT, TKA, CPNS, and PPPK. I built the frontend for both the admin and the student side from the Figma specifications and integrated the REST API.

- Typed API clients and skeleton loading states
- Profiled and reduced animation cost to keep navigation responsive
- Shipped the production build to a VPS

Student-side course view

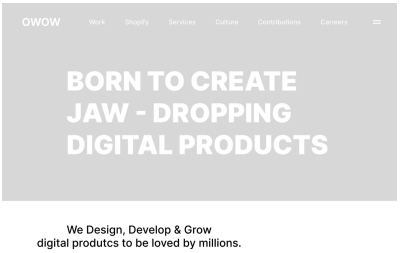

OWOW

UI/UX Design · Client work

Figma · Prototyping · UI Design

The platform a software development services company uses to present its offering and start client conversations. I worked the design side, from research and wireframes to the interfaces the site ships with.

- Wireframes and high-fidelity prototypes for service pages and the engagement flow
- Layout grid, type scale, and component states defined in Figma

Service and engagement pages

owow.io

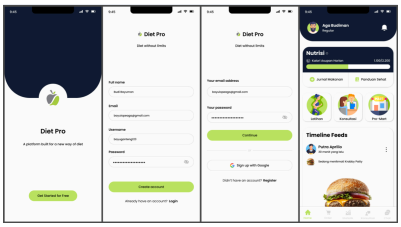

Diet Pro

UI/UX Design · University project

Figma · Android · Kotlin

A health tracking application designed during university: a daily calorie tracker, a curated health and fitness feed, and progress tracking toward diet goals. I designed the Android interface in Figma, from low-fidelity flows to the final screens handed to developers.

- Calorie tracking, informational feed, and progress views designed end to end
- Android layouts and interaction flows prepared for a Kotlin build

Calorie tracker and progress views

Client Websites

WordPress and Elementor, 2023 to 2024

Five client sites delivered in WordPress and Elementor across Indonesian, Vietnamese, and European markets.

Salsation Cruise · WPML multilingual build and booking integration · salsationcruise.com

CG-Carworks · service pages and on-page SEO for local search · cg-carworks.com

DeResto · service showcase pages and value-proposition copy · deresto.eu

The Extra Mile · mobile-first layouts for on-the-go booking · theextramile.co

Pelan Pelan Bali · SEO and content for international visitors · pelanbali.com

Experience

full metrics and history are in the CV

Software Engineer Badan Sistem Informasi, Universitas Islam Indonesia — Oct 2024 – Present · Yogyakarta

Rebuilt the GitLab CI deployment pipeline for a 20+ module Angular platform backed by 13 REST endpoints, cutting release time from 20–30 minutes to 1–3 minutes. Cut MySQL queries that timed out from up to a minute to under 10 seconds. Converted a 66,000-line Angular library to full Indonesian and English support: 53 templates, 1,718 bindings, and 619 dictionary keys.

Front-End Developer (Freelance) Softwaredeecode — Nov 2025 – Apr 2026 · Remote

Web Developer TerraCode — Oct 2023 – Jan 2024 · Remote

Areas of Expertise

Frontend Development

React, Next.js, Angular, TypeScript, HTML5, CSS3

Backend Development

Go, Gin, MySQL, REST API, SQL

AI Integration

Claude Code, OpenCode, MCP, AI-assisted development
